

2.21 Remaining User Stories

Due to lack of time, the team was not able to implement all creative ideas, we had. So we listed these below.

A possible InSite Future

- As a facility manager, I would like to have an overview about the historical data of the devices, so that I could know how something developed previous to going wrong - Data Development Visualization
- As a FM I want to be able to set certain requirements that issue a notification, so I can track the things I care for - Personalization of Notifications
- As a FM I want to select a group of AHU, so I can get a more generalized overview - Data Merging
- As a FM I want to be able to forward Notifications, so I can inform other colleges - Share Information
- As a FM I want to be able to label an issue as in-doing when i'm about to solve the issue, so that other FM know that someone is caring about it -Personal Problem Selection
- As a FM I want to know when maintenance activities are necessary so I know fix upcoming task
- As a FM I want to know which device needs my attention (Maintenance,...) early so I can plan the work on it
- As a client I want to know it if the data shown is valid so my FM use the right data for decision maker

- As a FM I want all data points that the museum provides displayed in the Insite app so I can access every information the building is providing
- As a FM I want to be able to click a maintenance point so I receive closer information on it
- As a FM I want a separate menu point for the maintenance calendar so I can see a monthly view of the maintenance schedule
- As a FM I want to see the history of the alarms so I can see patterns in the problems occurring
- As a FM I want all AHU data implemented on the platform so I can experience the whole building
- As a FM I want a AHU specific view beside the floor maps so I can see AHU specific data - AHU Maps
